

circuits and network analysis pdf

An electrical network is an interconnection of electrical components (e.g. batteries, resistors, inductors, capacitors, switches) or a model of such an interconnection, consisting of electrical elements (e.g. voltage sources, current sources, resistances, inductances, capacitances). An electrical circuit is a network consisting of a closed loop, giving a return path for the current.

The topology of an electronic circuit is the form taken by the network of interconnections of the circuit components. Different specific values or ratings of the components are regarded as being the same topology. Topology is not concerned with the physical layout of components in a circuit, nor with their positions on a circuit diagram.

The following example shows how to use this procedure. Suppose the switch is an IRF740 with $I_o = 5 \text{ A}$ and $E_o = 160 \text{ V}$. For this device $C_{oss} = 170 \text{ pF}$ and the mounting capacitance will be 40 pF .
