A dense non-aqueous phase liquid or DNAPL is a denser-than-water NAPL, i.e. a liquid that is both denser than water and is immiscible in or does not dissolve in water.. The term DNAPL is used primarily by environmental engineers and hydrogeologists to describe contaminants in groundwater, surface water and sediments. DNAPLs tends to sink below the water table when spilled in significant ...

A solvent (from the Latin solvĀ•, "loosen, untie, solve") is a substance that dissolves a solute (a chemically distinct liquid, solid or gas), resulting in a solution. A solvent is usually a liquid but can also be a solid, a gas, or a supercritical fluid. The quantity of solute that can dissolve in a specific volume of solvent varies with temperature. ...

The dissolution mechanism of cellulose in ILs has been extensively investigated to improve the dissolution capacity. Studies on the mechanism of the cellulose dissolution in ILs have indicated that interactions between the IL anions and the hydroxyls of cellulose play an important role in this process, and requirements of hydrogen bonding acceptor ability (or basicity) of the anion has been ...

Effect of the use of water and different organic solvents such as acetone, N,N-dimethylformamide (DMF), ethanol or methanol at various concentrations on the total polyphenol content and antioxidant activity was studied for the black tea and mate tea. Polyphenol contents of extracts were determined using ferrous tartrate (method # 1) and Folin-Ciocalteu (method # 2) assays.
