

physics of ferroelectrics a pdf

Ferroelectricity is a characteristic of certain materials that have a spontaneous electric polarization that can be reversed by the application of an external electric field. All ferroelectrics are pyroelectric, with the additional property that their natural electrical polarization is reversible. The term is used in analogy to ferromagnetism, in which a material exhibits a permanent magnetic ...

Condensed matter physics is the field of physics that deals with the macroscopic and microscopic physical properties of matter. In particular it is concerned with the "condensed" phases that appear whenever the number of constituents in a system is extremely large and the interactions between the constituents are strong.

In practice, this electromechanical coupling factor is commonly evaluated using a so-called resonance and antiresonance technique. With increasing measurement frequency, the impedance of piezoelectric materials is typically revealed as shown in Fig. 2(a) due to a mechanical resonance, the frequency of which is determined by the sample geometry for a given vibration mode.

Estrutura. O fosfato monopotássico pode existir em vários polimorfismos. À temperatura ambiente, forma cristais paracristais com simetria tetragonal. Ao ser esfriado a -150 °C, se transforma em uma fase ferroelétrica de simetria ortorrômbica e a temperatura de transição muda para at -50 °C quando hidrogênio é substituído pelo deutério. [3]
